## Lab - 8 Hashing Implementing Dictionary

Ayjun A. S  
18M18CS019

```
const int TS = 200;
```

```
class HashTable
```

```
{
```

```
    public:
```

```
        int k;
```

```
        int v;
```

```
        HashTable (int k, int v)
```

```
    {
```

```
        this->k = k;
```

```
        this->v = v;
```

```
    }
```

```
};
```

```
class Hashmap
```

```
{
```

```
    private:
```

```
        HashTable **t;
```

```
    public:
```

```
        Hashmap ()
```

```
    {
```

```
        t = new HashTable * [TS];
```

```
        for (int i = 0; i < TS; i++)
```

```
        {
```

```
            t[i] = NULL;
```

```
        }
```

```
        ~int HashFunc (int k) { return k % TS;
```

```
        void insert (int k, int v)
```

```
    {
```

```
        int ha = HashFunc (k);
```

```
        while (t[ha] != NULL && t[ha]->k != k)
```

```
        {
```

```
            ha = HashFunc (ha + 1);
```

```
        }
```

```
        if (t[ha] != NULL)
```

```
            delete t[ha];
```

```
            t[ha] = new HashTable (k, v);
```

```
    }
```

Ayjun A. S

```

int searchkey(int k)
{
    int h = HashFunc(k);
    while (t[h] != NULL && t[h] -> k != k)
    {
        h = HashFunc(h+1);
    }
    if (t[h] == NULL)
        return -1;
    else
        return t[h] -> v;
}

```

```

void delete(int k)
{
    int h = HashFunc(k);
    while (t[h] != NULL)
    {
        if (t[h] -> k == k)
            break;
        h = HashFunc(h+1);
    }
    if (t[h] == NULL)
    {
        cout << "No element at key " << k;
        return;
    }
    else
    {
        delete t[h];
    }
    cout << "Element deleted.";
}

```
